

Low McDep Ratio for Energy Profit

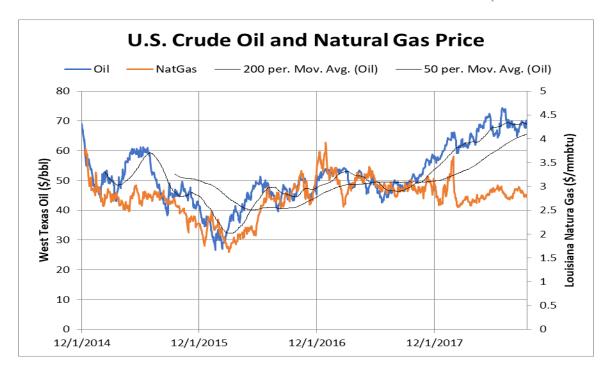

Summary and Recommendation

McDep oil and gas stocks appear attractively priced for new investment at a median McDep Ratio of 0.79.

- Among Integrated companies, short-term momentum has shifted to ExxonMobil (XOM) from Chevron (CVX) and Royal Dutch Shell (RDS). After underperforming its peers in stock price for the past two years, XOM may be entering a phase of outperformance. The company has maintained its level of capital spending in the face of investor pressure to cut back. Another oil discovery offshore Guyana by XOM boosts the confidence of a new management team. Nonetheless, price trend can be fickle. We like all three stocks for a diversified portfolio.
- Among Large Cap Independents, negative stock price momentum has taken Pioneer
 Natural Resources (PXD) to the lowest McDep Ratio in the group. Since PXD is most
 concentrated in the Permian Basin, investors may be concerned about near-term growth
 constraints as production capacity has expanded faster than transportation capacity to
 export terminals. We would put more weight on long-term value than on short-term
 motion.
- Small Cap Independents have the lowest McDep Ratio as a group. All four are trading in a golden cross pattern and above the 200-day average. **Range Resources (RRC)** is the last of the four to tick positive after forming a long, low base. New pipeline capacity is opening more markets for Appalachian natural gas and natural gas liquids pricing has benefited from oil price strength.
- Income stocks have lost positive momentum while driving estimated distribution yields up to 9%. Only **Dorchester Minerals (DMLP)** has a clear positive stock price trend. As usual, trends can change without notice. Income stocks as a group are more sensitive to natural gas price, which appears to be seriously lagging oil price (see chart <u>U.S. Crude Oil and Natural Gas Price</u> on page 2). Low natural gas inventories and the approach of winter may bring higher natural gas price. The real yield on Treasury Inflation Protected Securities may not be competition for oil and gas income as it is rising only slowly (see chart <u>U.S. Ten-Year Interest and Inflation</u> on page 2). Nor are slowly rising nominal yields much competition because oil and natural gas price may offset inflation. It may be the other way around. Higher interest rates signaling stronger economic activity are also signaling stronger energy demand.

We have optimistic expectations for stocks in our coverage (see <u>Tables 1-4</u> on pages 3-6). Past analyses provide more detail (see <u>Index of Recent Research</u> on page 7).

This analysis is intended for informational purposes and is not a solicitation to buy or sell a security. Past performance is no guarantee of future results.

McDep or its employees may take positions in stocks the firm covers for research purposes. No trades in a subject stock shall be made within a week before or after a change in recommendation.

Certification: I, Kurt H. Wulff, certify that the views expressed in this research analysis accurately reflect my personal views about the subject securities and issuers. No part of my compensation was, is, or will be directly or indirectly related to the specific recommendations or views contained in this research analysis.

Research Methodology/Ratings Description: McDep LLC is an independent research originator focused on oil and gas stocks exclusively. The firm applies the forty years of experience of its analyst to estimate a present value of the oil and gas resources and other businesses of covered companies. That value is compared with a company's stock market capitalization and debt. Stocks with low market cap and debt relative to present value tend to outperform stocks with high market cap and debt relative to present value.
